

InfoSHIP[®] AI Module supports the company users in the management of internal and external Audits of all kind, allowing the planning, the execution and the follow up of Audits and Inspections for all Ships.

Where necessary, every Audit can originate a complete follow up, thanks to the creation of Findings (Observation, Nonconformity and Major Nonconformity) and their subsequent Corrective Action (Ship and Shore side).

InfoSHIP[®] AI, that is a part of the InfoSHIP[®] suite, has been designed with the aim of meeting the requirements of all shipping companies, regardless of the type of ship and cargo.

This means that, depending on the market sector and type of ship, the software can be set up and implemented in accordance with the characteristics of each sector but always in compliance with current rules and laws.

An example of this approach is given, among others, by the management of Vettings in the field of oil-products transportation (Tanker). In this case we have implemented some functions that match the criteria currently in use for the classification and management of the findings and their outcomes (e.g.: the VIQ Code management).

From a practical point of view, InfoSHIP[®] AI allows to plan and manage any type of audit, vetting and inspection and involves into its workflow both the users onboard and ashore (always according to company policies).

Every transaction is automatically recorded in the system, in order to ensure full transparency and traceability of events and persons involved (creation, closing, opening of finding, assigning corrective action, closure proposals, final acceptance, ...).

The module can handle attachments of technical and/or commercial nature, regardless of the file format.

IB SOFTWARE

IB is a software-house highly committed in the world of Asset Management since 1983. The company is today a market leader in the supply of software systems dedicated to this specific and vast subject.

IB designs, deploys and implements its systems in different market areas (Marine, Industrial, Healthcare and Real Estate). IB provides systems and services for Maintenance & Operations improvements, with a special focus on:

- Technologies
- Methodologies
- Re-engineering of processes and
- Human Resources Expertise.

IB is RINA partner as regards software solutions and specific consulting for Shipping Companies, with particular attention to issues relating to the Technical Management (**InfoSHIP®**) and Energy Efficiency (**InfoSHIP® EGO** - Energy Governance).
