

IB SOFTWARE SOLUTION FOR MARINE INDUSTRY

InfoSHIP® is a suite of programs covering the full range of fleet management needs. It includes functions and modules designed to cope with specific Marine Market Requirements, Best Practices and Regulations.

Continuous innovations, together with suggestions received from the customers, are adapted into new solutions and included in the standard software version.

The goal is to provide clients with a comprehensive solution (and ever evolving) in terms of product, project and support and, at the same time, provide them with problem-solving tools that are global, simple and integrated, for an optimized Technical Management of their fleet.

InfoSHIP® is more than a software. It's a Management Model that aims to improve business efficiency.

SYSTEM MAIN MODULES

- InfoSHIP MP Maintenance & Purchase
- InfoSHIP MS Ship's Certificates & Events Management System
- InfoSHIP DD Dry Dock Process Management
- InfoSHIP DSF Decision Support Framework
- InfoSHIP TH Technical Hotel Management
- InfoSHIP GFR Guarantee Failure Reports
- InfoSHIP AI Audit & Inspection Management
- InfoSHIP CM Compliance Management

InfoSHIP® satisfies the following main requirements:

Complete: for the number of processes covered and the detail with which they are managed; for depth of information and large database dimensions; for the number and typology of reports.

Flexible: the interface can be modified in all details (layout, menu, access to procedures, fields, indicators and reports, ...) according to user or user group needs, and even for functions and ranks. This allows a very advanced users profiling, in all operational aspects. The internal configuration tool allows the implementation of a company standard model by which we can properly manage specific company processes and needs.

Interactive: as a shared daily work tool, it allows not only back-checks operations but enables real-time continuous activity of control, as well as the monitoring of performances and potential criticalities in general.

Specific: it is a system entirely devoted to Marine Industry; this is because it has been developed specifically for Ship-owners and Ship Managers.

InfoSHIP® is a great help for company users, as it supports concretely and in detail the execution of their duties. At the same time it is an essential tool for Decisions Makers, to whom it offers a wide range of information in a highly structured, dynamic and interactive way.

InfoSHIP® is produced, designed, implemented by IB and distributed together with RINA.

IB SOFTWARE

IB is a software-house highly committed in the world of Asset Management since 1983. The company is today a market leader in the supply of software systems dedicated to this specific and vast subject.

IB designs, deploys and implements its systems in different market areas (Marine, Industrial, Healthcare and Real Estate). IB provides systems and services for Maintenance & Operations improvements, with a special focus on:

- Technologies
- Methodologies
- Re-engineering of processes and
- Human Resources Expertise.

IB is RINA partner as regards software solutions and specific consulting for Shipping Companies, with particular attention to issues relating to the Technical Management (**InfoSHIP®**) and Energy Efficiency (**InfoSHIP® EGO** - Energy Governance).
